

I travel all 48 states and Canada being a truck driver and I have xm radio. I listen to weather and traffic the most. It helps me to figure what routes that I am going to take that will be the best for my tractor and trailer. I feel that it should not be up to the NAB to decide what kind of programming that should be provided by xm. The NAB needs to put theirselves in the position of others out there traveling the roads and realize that the services and programs xm provides help out in alot of different ways.
